International Journal of Railway Technology

Editor:

J. Pombo

Volume 6 - Issue 4 2017

The International Journal of Railway Technology (IJRT) is an international journal dedicated to research, development and application in the scope of railway systems. The aim of the Journal is to provide an international platform for researchers and experts to promote, disseminate and discuss the recent developments and advances in the field of railway technology. Furthermore, this publication aims to encourage interaction and collaboration between universities, research centers, railway operators and industry in order to identify problems, propose solutions and indicate directions for future research. The Journal publishes original papers that cover, but are not limited to, the following topics:

- Rolling Stock: Design, manufacture and maintenance; Modelling and simulation; High speed trains, light railways and freight capacity; Performance and optimisation; Aerodynamics and crosswind; Noise, vibration and comfort; Safety, security and reliability; Ergonomics and interior design.
- Infrastructure: Bridges, tunnels and transition zones; Track design, construction and maintenance; Interaction of vehicles with the infrastructure and the environment; Foundations; Track monitoring; Trackbeds: sleepers and ties; Geotechnical aspects: earthworks, embankments, stabilisation; Technologies for track defects detection.
- Energy and Environment: Re-use of kinetic energy; Energy sources and smart grids; Hybrid traction and power trains; Sustainable rail transport.
- **Signalling and Communication:** ERTMS European Rail Traffic Management System; ITS Information and Technology Systems.
- Operations Traffic management; Interoperability; Intermodal solutions.
- **Strategies and Economics:** Standards and regulations; Capacity and cost; Track access charges; Future trends in railway engineering.

Contents

The Tesys Rail Project: Innovative Models to Enhance	
the Energy Sustainability of Railway Systems	1-28
A. Frilli, E. Meli, D. Nocciolini, L. Pugi, A. Rindi, B. Romani, M. Ceraolo,	
and G. Lutzemberger	
Wheel-Rail Endpost Contact Characterisation using Ultrasound	
Reflectometry	29-49
L. Zhou, M.B. Marshall and R. Lewis	
Stabilization of a Two-Axle Railway Bogie: Roller Rig Tests	51-68
J. Kalivoda and P. Bauer	
Multi-Objective Optimisation of Railway Vehicle Seating Design for	
Passive Safety Improvement	69-88
M. Carvalho, J. Milho and J. Ambrosio
